

PLW

PV Solar Hot Water Controller

The PLW is an MPPT controller for off grid PV solar hot water and grid boosted systems. PV hot water solves many difficult installation problems and performs better than thermal solar hot water under many conditions. No frost protection devices or pumps to fail. No roof reinforcement needed. No battery required. Flexible: place tank near point of use and panels where convenient. Comes as a complete kit which includes a solar isolator, a low voltage element and two temperature sensors. Works with 60 cell and 72 cell panels.

Approvals: IEC 62109
